

CASE STUDY SNAPSHOT

Facility Overview

A 220-bed regional hospital in the Midwest partnered with us to address nurse workload, discharge bottlenecks, and documentation delays in its medical-surgical units. The hospital had been struggling with nurse retention, delayed discharges, and inconsistent compliance with admission and discharge documentation.

Goals

- Reduce **documentation** burden on bedside nurses
- Improve **discharge timeliness** and compliance
- Increase **nurse satisfaction** and support retention

How Altrix Group Closed the Gap

Altrix Group deployed licensed virtual nurses to support the facility's admission and discharge processes. These virtual nurses accessed the hospital's EMR, completed admission and discharge documentation in real time, and coordinated with on-site staff to prioritize patient flow.

Key Results After 90 Days

3.25 hours saved per unit each day in documentation

100% compliance was achieved in post-discharge follow up

25% fewer delayed discharges were recorded

28% higher nurse satisfaction was reported

What Our Partner Said

"It felt like gaining a second nurse on every unit without adding to payroll. Our staff was able to focus on patients instead of backlogged paperwork, and discharges moved faster than ever." – **Chief Nursing Officer, Regional Health System**
